

Project Planning and Control with Pert and Cpm

CPM	PERT
Focus on cost optimization	Focus on time control
Used in projects with predictable activities such as construction	Used in projects with unpredictable work such as R&D
Deterministic treatment of time - single outcome	Probabilistic treatment of time - uses three estimates of duration
Can show activities that can be sacrificed if needed to execute project because it distinguishes between critical and noncritical activities	PERT does not provide this information because it does not distinguish between critical and noncritical activities
Enables "crashing," a shortening of the duration of specific tasks while incurring the least extra expenses	Crashing does not apply

Project Planning and Control with PERT & CPM. Front Cover. Dr. B.C. Punmia & K.K. Khandelwal. Firewall Media, - pages. Project Planning and Control with PERT and CPM. Front Cover. B. C. Punmia, K. K.
