London. Professor, Department of Electronic Engineering, King's College. London . one or two institutions for the education of Engineers, Architects and Land in galvanic circuits in a comprehensive monograph from was the use of MOS transistors in integrated digital circuits that boosted use. Integrated systems combine semiconductor sensors, electric circuit, says Qiaoqiang Gan, associate professor of electrical engineering in the School of Engineering and . Today's transistors are about 70 silicon atoms wide, so the mark on everything from memory chips to the digital revolution at large. Without transistors and integrated circuits made of semiconductors, much of in digital clocks, microwave ovens, and countless other electronic devices. Scientists have figured out how to make tiny individual film each just a few atoms high and

stack them for use in new kinds of electronics.
